

Soprano

UNDINE MARTIN

Berlin, 28 July 2020

CONCLUSIONS:

[**Short background:** She is a soprano. She got to know brainLight during a concert tour. At that time she was totally exhausted due to having cared for her husband after a stroke for ten years and shortly after the concert tour losing first her father and then her mother.]

Using the healing programs of brainLight is like playing the piano - you have to use and repeat it every day.

Small successes can be achieved after a short time. Let us mention the Flea Waltz. Can be done in one day and the Harry Potter theme (movies) in 21 days, without prior knowledge. This skill evokes astonishment among friends and relatives and often earns the person great applause. The work sometimes takes a bit of effort, but in the end the inevitable success brings joy. But if you play the piano for 2 years synapses interlink in the brain, new areas are created, intelligence grows, protection against dementia e.g. and much more.

From this experienced and proven evidence on the piano I am convinced of the success through a long-term application of the healing programs of brainLight.

I have learned from a renowned psychologist that the healing of a trauma that is deep in the subconscious is quite possible through positive and clarifying thoughts. Perpetual repetitions (up to 2 years) may be necessary for this, however. Well, we have a choice. With the brainLight pyramid and the multitude of its programs, we have been given something that leads to a considerable recovery, if one can get involved with it.

The pyramid has become my companion and I am looking forward to the results in 2 years. The rapid pace at which everything in the world is changing, we cannot and do not always want to keep up with. Therefore, I am truly convinced, we all need support.

I have decided, in addition to a healthy diet, enough sleep, exercise and music, to use brainLight. It has led me out of the darkness of total exhaustion into the light, made me feel love again and gave me back my laughter.

THANK YOU brainLight.
